

Very Big Tower

Custom Design instructions

54 BLOCK DESIGN TEMPLATE

This template is the 54 BLOCK DESIGN TEMPLATE.

Send your design file to:
design@realgames.com.au

It is to be used if you are customising all 54 blocks in your set and wish to vary your design from block to block so that all 54 blocks do not have the same design, logo or message.

If all of your blocks will have the same design then there is no need to replicate the design 54 times using this template. In that case, the Single Block Template is all you need to complete.

If the number of sides per block to be customised is one you only need to apply your design to one side in the template. This can be either the top, bottom, side one or side two. Please leave the other three sides blank.

If the number of sides per block to be customised is more than one, then you should apply your design to the number of block sides to be customised in the template. i.e. if your order includes 3 sides of each block to be customised, then please apply your design to 3 out of the four sides in this template and leave one side blank.

We will print your high resolution design on the blocks. Please email your design file to design@realgames.com.au quoting your order reference number. Once we have received your design file and checked it, we will email you back a mock up of your block design for your confirmation before going to print.

How to create your Design File

Please use the Design File Template (PDF) on the next page and read this artwork guidance before sending your design file back to us. There are plenty of ways to add your design to the Template - you don't need graphic design skills! Try any of the following programs:

Adobe Acrobat (Mac & Windows)

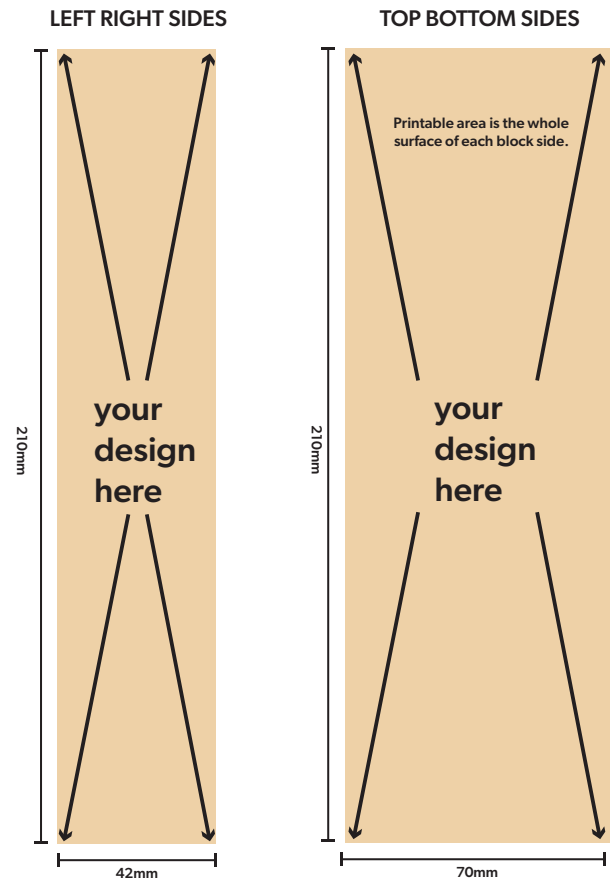

1. Open this PDF with Acrobat
2. Go to Edit > Add Image > navigate to your image/logo/etc.
3. Click to drop in your image.
4. Drag and scale your image to the desired location on the template.
5. Save the PDF, then email it to us.

Preview (Mac)

6. Navigate to your image file > right click on it > open with Preview
7. Once your image is open in Preview, press [Command] + [A] on your keyboard. This will select the entire image - shown by the dotted line moving along the edges
8. Press [Command] + [V]. This will paste a duplicate image directly on top of the original image
9. Click the duplicate image, and press [Command] + [C]
10. Navigate to the Cornhole Board Full Custom Design Template (this PDF), right click it, and open with Preview
11. Scroll to the blank Cornhole Board Template (page.2), and press [Command] + [V] on the keyboard
12. Drag the image to your desired position and scale it your preferred size
13. Save this PDF and email it to us

Microsoft Edge (Windows)

14. Find the Cornhole Board Full Custom Design Template (this PDF), right-click on it and open it with Edge
15. Hit the "Edit" button on the toolbar
16. Scroll to the Template Page of this PDF (page.2)
17. Go to the "Insert" tab and click "Image"
18. Browse your computer and select the image you wish to print
19. Drag the image to your desired position and scale it your preferred size
20. Save this PDF and email it to us

Printable area is the whole surface of each block side.

Please note: Whilst we can print to the edge of each side, there may be very minor overspray of your design on the adjoining side. We recommend leaving a one mm gap between your design and the edge of the block if you wish to avoid this.

Artwork Guidance

Please ensure that your artwork is high enough resolution to be printed at your desired size - you can check this by viewing your Design File PDF at 100% scale, you should be able to see exactly how it will print - if there is pixelation, this will show in the print.

For logos, you can avoid pixelation by using a vector file (.Ai, .SVG, .EPS, etc) to create your Template - vector files will not pixelate.

Limited Assistance

If you do not have the skills to create a Design File, we can help to construct the design file for you - provided that your design is simple and you know exactly what you would like. Please note, this does not include any design work such as creating graphics or coming up with design ideas. The detail design concept must be yours and we will simply construct it for you as long as your requirements are very clear. Any logos or images to be incorporated must be provided by you in a vector file (.Ai, .SVG, .EPS, etc) or a high resolution JPG or PNG. We
